CHALLENGE SHEET

Cloudvault

A GraphQL document-ingestion API whose SSRF chain reaches a privileged internal vault.

DIFFICULTY	TRACK	HOST PORT	LAB ID
HARD	WEB	8080	cloudvault

EASY MEDIUM HARD INSANE

VERIFY THE SOLVE

```
python3 ../scripts/check.py cloudvault
```

Brief

CloudVault is a document-ingestion platform. The API accepts URLs and imports documents from them. A low-privileged account is seeded. Retrieve the flag hidden in the CloudVault environment.

Setup

Run these from the lab directory:

```
docker compose up -d
```

The GraphQL API listens on `http://localhost:8080/graphql`. A seeded account is provided:

- Username: `player`
- Password: `changeme123`

Goal

Authenticate and explore the API. Retrieve the flag. Verify the solve from the lab directory:

```
python3 ../../../scripts/check.py .
```

See how to play for the usual solve loop.
