CHALLENGE SHEET

Techvault

An e-commerce GraphQL API with a chained authentication bypass, SSRF, and command injection vulnerability.

DIFFICULTY	TRACK	HOST PORT	LAB ID
HARD	WEB	4000	techvault

EASY MEDIUM HARD INSANE

VERIFY THE SOLVE

- `python3 ../scripts/check.py techvault`

Brief

TechVault is an online laptop retailer. The storefront runs entirely on a GraphQL API behind a single `/graphql` endpoint — accounts, catalog, and a few internal tools all live there. You start with outside-customer access only. Find your way to a real account, then work the API toward the hidden internal data.

Setup

Run these from the lab directory:

```
cp .env.example .env
docker compose up --build -d
```

Open `http://localhost:4000/graphql`.

Goal

Find your way into a real account. Chain what the API gives you from there. Extract the flag. Verify the solve from the lab directory:

```
python3 ../../../scripts/check.py .
```
