CHALLENGE SHEET

Nexora Platform

Nexora is a deliberately vulnerable B2B SaaS CTF that simulates a realistic Blind SSRF attack using GraphQL, OAST, internal reconnaissance, and DNS rebinding to bypass hostname validation and reach internal infrastructure.

DIFFICULTY	TRACK	HOST PORT	LAB ID
MEDIUM	WEB	8080, 8081	nexora-platform

EASY | **MEDIUM** | HARD | INSANE

VERIFY THE SOLVE

```
python3 ../scripts/check.py nexora-platform
```

Brief

Nexora is a SaaS integration platform on GCP. Investigate the public app and find a path to resources that should stay off the public edge.

Setup

Run these from the lab directory:

```
docker compose up --build -d
```

Open `http://localhost:8080`. The OAST dashboard is on port `8081`.

Goal

Reach the protected internal surface and recover the flag. Verify the solve from the lab directory:

```
python3 ../../../scripts/check.py .
```

Reset

```
docker compose down -v
docker compose up --build -d
```
